

# Installation Information for Bolehill Farm POI - TomTom Satellite Navigation System

The Bolehill Farm Point of Interest (POI) consists of:

- a file with extension .OV2 (BolehillFarm.ov2)
- a companion file with extension .BMP (BolehillFarm.bmp)

***The following steps can be followed to download this POI to your TomTom:***

**\*\*\*\*\* Back up your SD card before you continue \*\*\*\*\***

As a precaution, before you make any changes to your set-up (e.g. add POIs etc) please ensure that you have a viable backup of your SD card. This is especially important if you have a TomTom Go 300 unit.

## **Step 1. - Download the POI file**

- Download the two POI zip file. Save the file on your computer by selecting "save" when prompted. Unzip the .OV2 and .BMP files and save in a place where you can easily find it again for step 3 of the installation, e.g. on your Desktop or in My Documents.

## **Step 2. - Connect your TomTom GO to your PC**

- Connect your TomTom GO to your PC using the USB data cable. The USB cable is supplied with your TomTom GO product. Ensure that TomTom GO is powered using the AC adapter.
- Your TomTom GO is now visible in "My Computer" as a "Removable Disk".

## **Step 3. - Copy the POI files from your PC**

- Go to the directory on the local hard drive of your PC where you stored or downloaded the POI files (.OV2 and .BMP files)
- Select and copy the POI files.
- You must copy the (.OV2 and .BMP) files - do NOT copy the folders.

## **Step 4. - Copy the POI files to your TomTom GO**

- Go to "My Computer" on your PC;
- Go to "Removable Disk";
- Then go to the map directory, for example the folder "Great\_Britain-Map"; and "paste" the POI files into this folder.

NB If you have a TomTom Go 700, with all of the maps of Western Europe in one place, then you use the "Western\_Europe-Map" folder.

The POI files are now successfully copied to this folder. You are ready to use your new Bolehill Farm POI on your TomTom GO.

## **Step 5. Display POIs on your TomTom GO**

- Finally, to enable the Bolehill Farm POI in your TomTom GO select it in your POI categories:
- Change Preferences | Manage (or Maintain) POI | Enable / Disable POI
- Select "BolehillFarm".

Bolehill Farm is now displayed on your GO screen in both 3D maps and 2D maps.

Even if you do not display POIs on screen, you can now "navigate to" Bolehill Farm.
